b)

$$\begin{aligned} \text{SUM} &= S_1 + S_2 \sim (\sin \omega t - \sin (\omega t + \varphi)) \\ \text{DIF} &= S_1 - S_2 \sim (\sin \omega t + \sin (\omega t + \varphi)) \\ \text{DIF} &= 0 \quad \omega t = -\frac{\varphi}{2} \end{aligned}$$

$$\frac{d\text{SUM}}{d\omega t} \left(-\frac{\varphi}{2} \right) = 0 \quad \text{EXTREMUM}$$

EXTREME VALUE

$$\frac{d^2 \text{SUM}}{d(\omega t)^2} \left(-\frac{\varphi}{2} \right) \approx +2\omega \cdot \sin \frac{\varphi}{2} \quad \text{MINIMUM}$$

c)

$$\begin{aligned} \text{SUM} &= S_1 + S_2 \sim (\sin \omega t - \sin (\omega t - \varphi)) \\ \text{DIF} &= S_1 - S_2 \sim (\sin \omega t + \sin (\omega t - \varphi)) \\ \text{DIF} &= 0 \quad \omega t = +\frac{\varphi}{2} \end{aligned}$$

$$\frac{d\text{SUM}}{d\omega t} \left(+\frac{\varphi}{2} \right) = 0 \quad \text{EXTREMUM}$$

EXTREME VALUE

$$\frac{d^2 \text{SUM}}{d(\omega t)^2} \left(+\frac{\varphi}{2} \right) \approx -2\omega \cdot \sin \frac{\varphi}{2} \quad \text{MAXIMUM}$$
